

Google Chromebook Printing

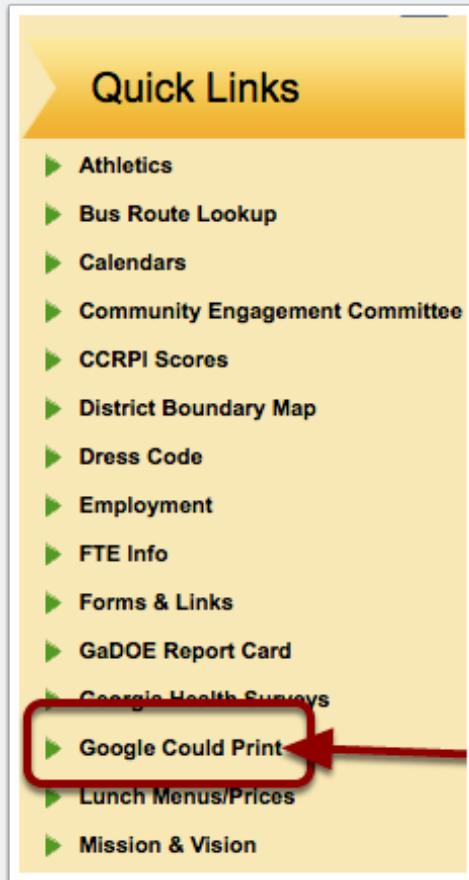

This article will guide you through adding one or more print queues to Google Chromebooks and the Google Chrome Browser. Once the printers are added to your gmail account one time the setup is complete. It is not necessary to add printers a second time after they are added once.

If teachers or students wish to print from their personal devices to the school printers this is currently the only supported method. Users will install google Chrome and follow these directions to print from their personal devices.

Accessing Google Cloud Printers website

Go to your schools home page and, under the quick links on the left side of the page and click the Google Cloud Printers link

Google Chromebook Printing

Google Chromebook Printing

Adding Printer

Click the link of the printer that you need to add.

Google Cloud Print

Peach County School District utilizes PaperCut Print Management software to manage user printing. The links below are associated with and linked to the various queues that the users will be familiar with. To use Google Cloud Print in Google Chrome and on the Chromebooks, please click the link below that corresponds to the printer that you need to print to and then add it to your Peachschoools Google Account.

To add the Ricoh Black and White Queue to a device click [HERE](#)

To add the HP Black and White Queue to a device click [HERE](#)

To add the HP Color Queue to a device click [HERE](#)

Google Chromebook Printing

Add Printer

Click the add printer button

Print to **HP Color Queue**

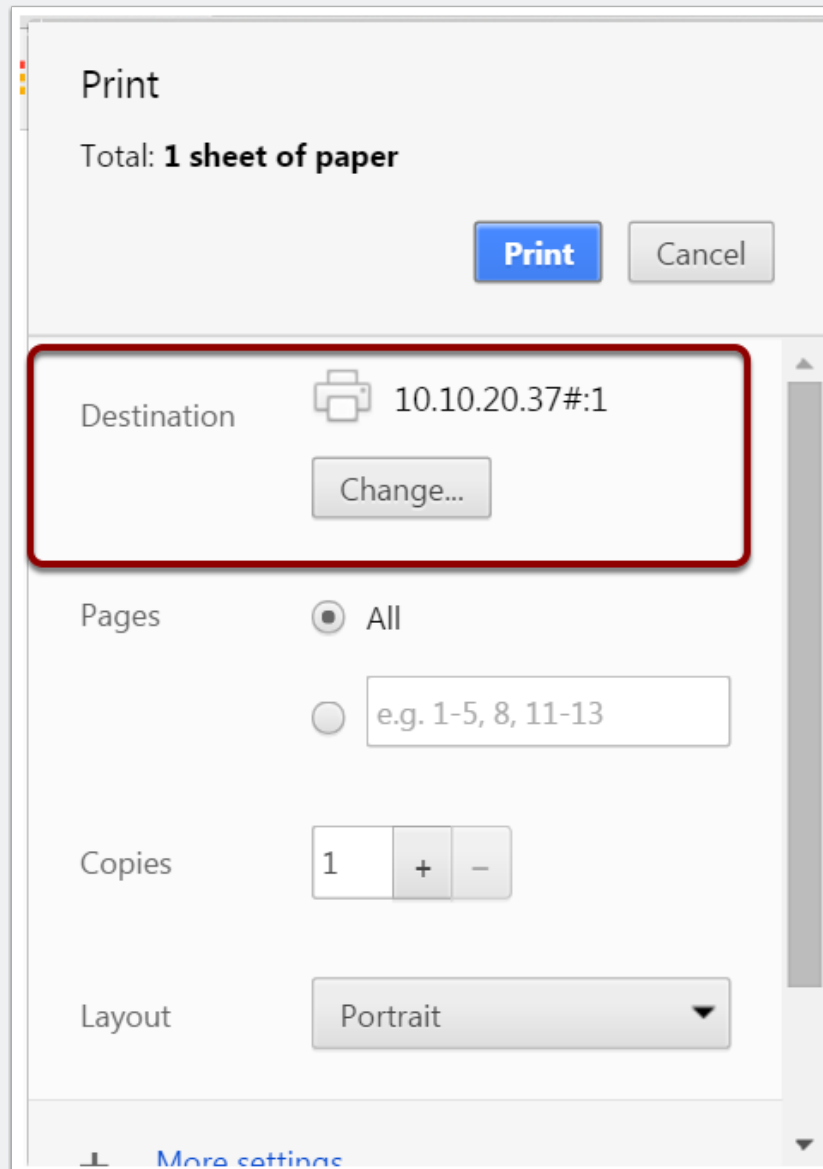

After adding this printer for **jd@peachschools.org**, you'll be able to use [Google Cloud Print](#) to print to this printer from your PC or mobile device.

Add Printer

Google Chromebook Printing

Using Cloud Print

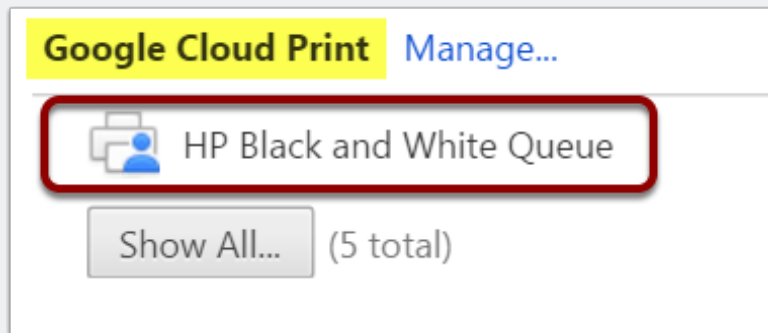

On the Google Chromebooks or in Google Chrome, click print as usual then in the destination box click the Change... button

Google Chromebook Printing

Selecting Printer

Under Google Cloud Print, select the Print Queue that you want to print to.

Printing Job

Make sure that the print queue that you want to print to is correct and then click print. From this point forward you can release your job as you normally would.
